What's happening: The future pedestrian safety improvements for Sloat Boulevard at 23rd Avenue will provide a safer environment for pedestrians, motorists, cyclists and transit riders with the installation of special traffic calming features such as bulb-outs, curb ramps, crosswalks, extended medians and a new pedestrian activated crossing beacon.

Improvements:
- Install a new mast-arm traffic beacon that will overhang Sloat Blvd. and be activated by pedestrians with the push of a button when they're ready to cross the street
- Extend the eastern median island in the middle of Sloat Blvd. to provide an improved pedestrian refuge area
- Add a bulbout, or sidewalk extension, at the north end of the crosswalk to shorten the distance to cross Sloat Boulevard
- Install pedestrian countdown signals so people know how long they have to cross Sloat Boulevard
- Construct ADA compliant curb ramps at the intersection
- Add streetlights

When: Construction planned to begin Summer 2015
Where: Sloat Boulevard at 23rd Avenue
